nvidia win 10 Clamp not works?
Geschrieben von papallu - 08.10.2019 08:34

_____

hi guys,
i would like to know if some of you use windows 10 like me, because now nvidia setting does not work for me.
i use clamp fixation but Nothing happenning now, i installed rfactor and gtr2 to test it and i have the same problem
the tracks line are flickering like i am using clamp allowed :(

_____

no need to answer me guys!
i need to install Windows 7 to play gtl with clamp because only new drivers nvidia works with win 10 and the clamp option
does not work with new drivers nvidia

bye

_____

hi there,
finaly i didnt solved my problem :(
i though i could install windows 7 to fix this problem, but my graphic card only works with win 10.

in nvidia panel, the Texture filtering - Negative LOD Bias does not work with new drivers.

without texture filtering=clamp, i can not play anymore because the visual graphism is disgusting.

do you have an issue to solve that? do you use an old video card and old windows to play?

_____

Have you ever tried the Nvidia Profile Inspector and set Diablo 3 for antialiasing compatibility? With this it works for me
