## Dashpanel

Geschrieben von Lehh - 24.11.2019 11:19

---

Hi to all.

In my current version of GTL the dashboard doesnt work. And also not every car have it. So i found something. Someone have any alternative dash? Which kind of them, how does it work?

Hi Lehh,

I am using this one sometimes:

<http://www.simracing-tools.de/simtools/>

When the program is started, you get an IP adress within your network.

On each device (Computer, tablet, Smartphone, Raspberry Pi etc.) the dashboards are available using this adress in the browser.

Plenty of different dashboard styles are available and you can also edit / create your own dashboard including buttonbox...

My version was for free - I don't know the current conditions.

Regards,

dikl

But within your own network from your router, the IP WILL be constant for the dashboard program.

Nothing to do with external IP changes - neither static nor dynamic.

have a tryâ€!

regrads,

dikl
