\"Cannot connect to the server\"

Posted by byagm - 2020/01/07 20:55

_____

Hi guys!

Game today says "cannot connect to the server" when IÂ´m trying to log-in.

Shaggy has the same problem.

_____

GTL Mehrspieler online geht nicht mehr.
Taskmanager sagt GTL inaktiv:blush:

_____

Hallo

pleased to return

I changed operating system, I installed windows 10 and clearly I had also to reinstall GT Legend, from DVD because I have this version.

I applied a no cd application (because with Win 10 GTL does not run from DVD, and I used it also with Windows 7 so as not to wear the DVD)

After I applied the 1.1.0.0 update.

Then I start the game, the game run, choose multiplayer, apply the online key, choose internet, connect:

I get the list of the 8 Altbierbude servers (plus two others protected by passwords), I select any of the 8 servers but I cannot connect and this message appears:
Match not available. The host version may be updated or changed.

Try again with Lowguard:

Server: lowguard.altbierbude.de
Port: 810

on lowguard windows the message appears:
cannot connect to server 141.xx.37.xxx:810

I start GTL from lowguard (as usual when I had Win 7) but at the end I arrive to same condition:
Match not available. The host version may be updated or changed.

Windows Defender firewall: GTL allowed, lowguard allowed

On Fritz!Box 7590 allowed:
UDP 34297 and 34298
TCP 34347

If anyone could help me i would be very grateful
Hello everybody

Hiho,

It won't work without our content and car classes. You have to use our updater, remove copy protection and don't try anything with foreign NoCD exes. And then of course GTL runs without DVD under Windows 10.

http://wiki.bierbuden.de/GTLInstallation/en

Good luck and Glück auf!

_____

Hello everybody:)

I did a clean installation following the above advice from MichaW and in fact now I can enter the game sessions, I connect to all the servers, I choose any car of all of Bude but when I enter the session I always find myself as a yellow "1970 Mini 850" loaded car, as per attached screenshot:

 http://www.altbierbude.de/images/fbfiles/images/low_loaded_car.jpg

and the server kicks me out.

The same happens if I also play locally, but in this case the game doesn't throw me out and I drive the Mini

What's wrong yet?
Thank you for help

_____

hiho,

The autoupdater was completely finished and gave a message like "done, good race"?
Then please try to install the carclasses again (manually).

http://www.altbierbude.de/component/option,com_remository/Itemid,26/func,fileinfo/id,1242/lang,de/

Glück auf!
