## Can't get to server 2

Geschrieben von Gsatri - 28.05.2020 02:55

---

Hi guys, I am really new to this game and I have lots of doubts about some stuff.

For the last two weeks, I've been playing with a friend in the server 2, with the standard cars of the game GTL (only installing the tracks from this website). But since Monday we couldn't be able to enter with the Lotus Cortina or with the Alfa Romeo GTA (the cars that we use to play there), furthermore, we can't enter to the game even with modded cars that the server says that is hosting for the races. Do you know what happened with server 2?

Thanks a lot for the help, we have been solving little issues step by step for playing the game for a month now, but it is being complicated for playing online

Good morning,

on server 2 currently runs the ABB 60s class, before that it was our ABB TC-65. also other tracks. In both classes there is a new car, the Vovo Amazon. You should have installed the class, the tracks and all cars. I can only strongly recommend to use the ABB Updater to keep the installation up to date.

best regards

Glück auf!
