## CanÂ't get to server 2 Geschrieben von Gsatri - 28.05.2020 02:55

Hi guys, I am really new to this game and I have lots of doubts about some staff.

For the last two weeks, I ve being playing with a friend in the server 2, with the standart cars of the game GTL (only installing the tracks from this website). But since monday we couldn to enter with the Lotus Cortina or with the Alfa Romeo GTA (the cars that we use to play there), further more, we can to enter to the game even with modded cars that the server says that is hosting for the races. Do you know what happend with server 2?

Thanks a lot for the help, we have being solving little issues step by step for playing the game for a month now, but it is being complicated for playing online

Good morning,

best regards

on server 2 currently runs the ABB 60s class, before that it was our ABB TC-65. also other tracks. In both classes there is a new car, the Vovo Amazon. You should have installed the class, the tracks and all cars. I can only strongly recommend to use the ABB Updater to keep the installation up to date.

GIück auf!
