
Problem with loading cars to the server

Geschrieben von Lukaniek - 15.01.2021 11:30

Hello. I have a problem loading cars to the server. I have windows 10 (64 bit). The game works fine, all add-ons work fine. The problem arises when I want to enter the servers and then I always load the mini-cooper ... no matter what car I take, only the mini-cooper is loaded. I'm attaching a screenshot. I am asking for help because I don't have the head to do it anymore. GTR2 works normally ...:(:(<http://www.altbierbude.de/images/fbfiles/images/gtlscreen1.jpg>

Hello,

did you do your installation with our updater and do you also use our CarClasses? Did the autoupdater give the message "done, good race"?

Glück auf!

=====

Re:Aw: Re:Problem with loading cars to the server

Geschrieben von Lukaniek - 15.01.2021 11:38

<http://www.altbierbude.de/images/fbfiles/images/gt44444.jpg> Yes, I have everything downloaded and installed. I think it's the fault of windows 10 ... I didn't have such problems on windows xp. And do you GTL drivers run correctly on windows 10 64 bit?

Aw: Re:Problem with loading cars to the server

Geschrieben von MichaW - 15.01.2021 12:14

No, this is not a Windows 10 problem, GTL runs much better with it than with Win7 for example. And this only happens in multiplayer or also in singleplayer?
And which entries are in the updater under GTL Lobby?

Glück auf!

=====

Aw: Re:Problem with loading cars to the server

Geschrieben von MichaW - 15.01.2021 12:21

Please install the CarClasses manually again. Download, unzip and then copy the GameData folder into your GTL Gamedata folder and overwrite it.

http://www.altbierbude.de/component/option,com_remository/Itemid,26/func,fileinfo/id,1242/lang,de/

Glück auf!

Aw: Problem with loading cars to the server

Geschrieben von Lukaniek - 15.01.2021 12:45

It's bad in multi and single mode. Nothing is entered in the Lobby recorder. I download classes, we will see if it will be good.

Aw: Problem with loading cars to the server

Geschrieben von Bordi - 15.01.2021 12:47

Hi Lukaniek

I suspect the error in the OnlineKey.

Please check whether the key is displayed in the autoupdater.

You can find this under Tweaks.

If the key is missing there, please enter it, click on set and confirm with OK.

Check this in the registry under "HKEY_Local_Machine \ Software \ WOW6432Node \ 10tacleStudios \ GTL \ Keys".

Don't forget to run GTLConfig.exe and GTL.exe as administrator.

Then please try again.

Should work now.

Hopefully this solves your problem.

Good luck and have fun.

Bordi

Geschrieben von MichaW - 15.01.2021 12:58

Did you have any content in the installation that is not from the ABB?

Glück auf!

=====

Aw: Problem with loading cars to the server

Geschrieben von Bordi - 15.01.2021 13:06

these empty fields are normal.

Aw: Problem with loading cars to the server

Geschrieben von MichaW - 15.01.2021 13:08

Your Mini 850 is always loaded, please go to GTL/GameData/Teams/Abb Zwerge/ 1970 Mini 850, open one of the 3 car folders, open the car. File with an editor and scroll all the way down: which entries do you have under classes?

Glück auf!

=====

Aw: Problem with loading cars to the server

Geschrieben von rdjango - 15.01.2021 16:35

Hello,

If your onlinekey is truly correct, I propose a new install first inside the autoupdater so the content will be correct. Second if it doesn't help a complete new installation of gtl. That solved problems with the installation very often.

And respect - only content from ABB otherwise it will not work correct. B)

greetings

Reinhold

Re: Problem with loading cars to the server

Geschrieben von Lukaniek - 15.01.2021 20:41

I only have accessories from ABB. I was already doing a reinstallation, it didn't help. I will describe briefly how it breaks down. After downloading all add-ons, I start the game. Everything works for single player, even I can choose all cars ... the problem appears when I go to the internet altbierbude servers and then no matter what car I take, 1970 mini cooper appears ... and then the single player also stops working windows I have original fully updated, drivers too, gt legends game also original, I run gtl in compatibility mode, lowguard also works properly give some more solutions ... I will be grateful for help nothing buried in the game files after installing the game, I installed crack no dvd ...

Re:Problem with loading cars to the server

Geschrieben von Lukaniek - 15.01.2021 21:05

I have created a new driver profile and everything is back to normal. single player works normally, then I go to the servers and then the 1970 mini again. There seems to be a problem with the driver profile. just why?

=====

Aw: Re:Problem with loading cars to the server

Geschrieben von MichaW - 15.01.2021 21:15

No Problem with your driver profile, its a problem with the classes.

I need to know which entries are in the .car.file of the Mini 850, otherwise we won't get anywhere here. And why a NO-CD crack after installation? No one needs it if he uses the updater. This is the path to the car file of the Mini in a German GTL.

And you have followed the instructions exactly during your reinstallation? And I mean exactly ...

I need all entries under classes, at the very bottom of the file

GlÃ¼ck auf! http://www.altbierbude.de/images/fbfiles/images/Screenshot_2021_01_15_210839.jpg

Geschrieben von rdjango - 15.01.2021 23:34

Hello,

often it was the key when everytime the same car comes (gulf ford) - they used the dvd-key instead of the online-key.

I'll do it all again tomorrow. I have a version of the game that requires a CD, checks the CD every time I start the game. Since I do not have a drive in my laptop, I take this crack no dvd. So I won't need this crack no dvd? How do I follow the instructions? The game will start normally?but why I didn't have this option in autoupdater?tomorrow I will install everything from scratch and let me know if it's okay.

Aw: Problem with loading cars to the server

Geschrieben von Bordi - 16.01.2021 06:47

Good Morning Lukaniek

If you have followed the installation instructions (see here :

<http://wiki.bierbuden.de/GTLInstallation/en>),

then unfortunately I don't really understand your problems.

It is extremely important with the DVD version 1.0.0.0: First install completely and start at the end.

In order to be able to start GTL without CD there is the 4GB patch in the autoupdater. This not only provides more RAM, it also ensures that GTL can be started without a DVD.

You will also find the option "Reinstallation" in the autoupdater. With a GTL installation without foreign content, this is an easy chance to repair a faulty installation.

I wish you success

greetings

Bordi

<http://www.altbierbude.de/images/fbfiles/images/3333333.jpg>

Welcome back. I did everything again. According to the instruction. It's still bad. I also noticed that everything breaks the first time logging into the network. Before logging into the network for the first time, the game runs in single player mode as normal. It loads all cars without a problem. I have no idea what the fault is:(:(

Hi,
danke dir.
Daran lag es leider nicht. Bei mir waren es die Soundeinstellungen die zum Absturz führten.
Läuft wieder.
Danke

Hallo,

bei mir beendet sich GTL ebenfalls wenn ich die 1302 RS auf S1 laden möchte.
Optionen/Grafik/Fremdfahrzeuge steht auf max.
Weis jemand Rat ?

Grüße

Andreas

Hiho,

ohne Trace Datei ist das stochern im Nebel. Helfen könnte evtl, Eigenes Auto und Fremdfahrzeuge auf hoch, nicht max setzen.

Glück auf!
