## HELP please

Geschrieben von jonathon555 - 10.11.2006 09:53

---

I have downloaded all tracks now & all car packs , but i have tried to join a game in miami. When it started loading the other players the game just crashed. What can i do to sort this problem ? everytime

I really want to race

Hi i have downloaded all tracks @ updates i have just tried to join the mexico track & it crashed at the same place when loading the other players. Do i need to download anything else to sort this problem ?

its frustrating me now

I am having the same problem jon - the only thing I could suggest is to completely uninstall and fresh reinstall. but for the sake of just one server I dont feel its worth it. shame really but no other server gives me this problem so I would think its a corrupted file somewhere in either the cars or tracks that I have downloaded from here. and I cant really be that bothered to do it all again when there is no guarantee that it will sort it

No, no,no

you guys don't have to download any other files than the downloads from "altbierbude"

But:

Sometimes, in the Car- and Track- folders it could be, that, after installation, you've got some files as twin - files registered.

Cause of this effect it doesn't work.

For example:

Kyalamy (as folder) inside there is

-----Kyalamy (as folder)

-----data (of track)

So please take a look at all track and car folders particularly, that you don't have double installes files.

In case of this, copy the second folder with data's inside to an extra folder on desktop or anywhere, delete the file in GTL, than reinstall the copied file again to GTL that you've got just one installed.

---

I think it runs after that.

Greets  
Mathias
