
Connection to server not possible (noob)

Posted by Ilisox - 2012/05/19 19:36

EDIT : I entered 94.23.231.41 address in options -> lobby and now it works... this info could be given in user's guide, no ?! ;)

Hello everybody,

I have run the autoupdater on a clean GTL install. All seems to have worked fine.

But after, I don't know how to connect to servers.

- I have to choose internet or lan ?
- Where do I have to enter www.gtl-server.net address ? Do I have to enter IP address of server in Options -> Lobby ?
- Where do I have to enter www4.altbierbude.de address.

I created a new account and saw a message which confirmed creation success but I did not receive any email after that...

If I try to connect to server, I get this message "Server connection not possible"

Thanks, I would like to play tonight... ;)
