
help ! gtl crash

Geschrieben von pisuke - 27.12.2012 20:37

Hi. i buy yesterday gtl from steam. i download Altbierbude and start auto update. after this the game after start crash and exit.
what can I do?

Run the Autoupdater again and when it tells you that there are no 'New files' close that window and then click on Commands/Reinstallation.

This won't actually reinstall the cars and tracks but it will check them over as there are nearly always some cars and tracks that still need to be installed. This will find them for you and install them. It doesn't take very long to do this action.

If you still have problems write here again m8.

Run the Autoupdater again and this time click on 'Tweaks' then 'Unlock all 'cars'. This also gives you 1 million in credits.

Underneath there is 'Set Car Price' and you can make all cars the same credit price that you can choose.

Try exploring the Autoupdater to find other things that can help.

Hope that fixes your problem m8.

thank you very much. it is all right. another question. how to make multiplayer? i bought via steam and i am registered here. i launched the game via the updater but in multi i can't go into the server.. why?

another little question. when the days in the auto updater are finish.. what it happens? how much do i have to pay to stay in the auto updater?

THANKS

Hi,the usage of the autoupdater is free, only the days between christmas and newyear are free for all altbierbuden members for ftp-server downloads. This service is normaly "purchased" by a donate to the Server-cost's, look at the bottom of the page, there's an button to make a donation via PAYPAL to get FTP-Server downloads. It's a decision of you to make it or not.
Please excuse my bad english as it's not my "mother-language";)

Greet's Jens:)

Hi,

you have to create an online accountingame via Multiplayer->Internet
Please use the same name as on the website.
You can use the online key provided by steam.

The autoupdater is free of charge, donation or not.
You can get FTP access when donating, which provides faster download.

Cheers
Tom
