
I need help

Geschrieben von ASantos - 24.04.2013 16:01

Hello! I install gtl and install altbierbude pack, but have same problems

1Â° In altbierbude board i make all update, but only have car, the tracks missing, and in the game, i cant buy cars, the simbol to click to buy is dark.

2Â° I cant start game in altbierbude boar, the simbol was desconnect, why?

Tanks

Santos...

The reason for you problem is that you do not have the money to buy new cars yet and the other tracks are not yet available to you until you do the following which will give you 1 million credits and unlock the tracks:

Start your Altbierbude Autoupdater and when it shows click on 'Tweaks / Unlock all cars / Create TG2001.DYN then close the Autoupdater

This should be fine now.

Gee :geedee: :dance:

Gordon....not only that! He had to set up a new profile ingame.Old Profiles are not hit by the TGN File. He must create a new player and this player now have enough \$ and all tracks were free.

B)
regards Dirk

Hi and at first: sorry for my very bad english... :blush:

Do you have restart the AutoUpdater?

Other ask: The portforwarding/ or triggering in your firewall and your router are okay?

If you download manual and start the AutoUpdater, the AutoUpdater can not connect, because you can use your IP only for one of this.

I have same problem some days bevore. I have deinstall the AutoUpdater and installed this tool again. After this it is running better like never befor.

Good luck

Did you install GTL correctly?:

1. Install GTL from the DVD - Attention! Don't start the game yet.
 2. Install Update V.1.1.0.0 .
 3. Install Python, Wxpython and the Autoupdater (to be found at altbierbude.de -> downloads -> miscellaneous)
 4. Run the GTL noCD Patch (Autoupdater->Tweaks) - this may take some time since about 170 MB must be downloaded.
 5. Start the Autoupdater to install new cars and tracks. Again, you have to be patient because the updater currently has to download about 20 GB.
 6. When it is finished click on 'Tweaks / Unlock all cars / Create TG2001.DYN . You can also set the car price e.g. at 1 (but not 0!).
 7. Start GTL, create a new profil and you're ready to race.
- (Taken from the German FAQ, section Installation.)
