240 Z and Cortina

Geschrieben von rillo - 10.08.2013 11:41

_____

Hi

I had a problem with my GTL installation in that the updater here gave me an error code.So I reinstalled it from steam and now the updater works fine but if I try to use the Lotus Cortina the game crashes to desktop,also if I try to use the Datsun 240Z the buy tab is greyed out which stops me from using it

any help appreciated
Rich

The greyed out buy tab (icon) means you have not bought the car yet. Have you got the funds to actually buy it?

You can make all of the Altbierbude cars the same affordable price if you want to by starting the Autoupdater then clicking on Commands/Tweaks.

The problem with your Cortina crashing the game could be a bad installation of that car. The best idea would be to start the Autoupdater go to Commands/ Reinstallation. This won't actually reinstall the mod(s) but will check the install out for mistakes etc.

Hope that helps you m8!! :geedee:
