
Lost dial needles

Geschrieben von koi - 16.10.2013 19:44

I wonder if someone could help me restore the tachometer, speedometer needles and the timing HUD?

They have gone on all cars as far as I can see.

I have not changed or altered anything, but perhaps I have pressed a key on the keyboard?

Thanks for any help,

Moz aka Maurice.

I believe it's a button 1 to 5 over the letters.

but in the cockpit does only work when you activate in the updater.

in the other views works everytime.

greetings Schwiizer

Is it by the way normal that every car of mine shows wrong in tachometers? Example mini shows that it revs to 1000rpm. Engine isn't running so much. Every car has this problem. Needles go always over the red...

I have steam version 1.1.0.0.

And Altbierbude updater used with all cars and tracks.
