G27 and GT LEGENDS

Posted by celo - 2015/01/15 15:16

_____

Hi,

Someone knows wich is the best way to configurate my G27 for GT LEGENDS??
I took a look on a lot of forums to find this information and i saw a lot of things, for these reason I need some answers.

- Do I need to download rfactor software for set up my G27 in the best way?

My purpousal is get the best real sensation playing GT LEGENDS.

For now i can set up G27 wheel standar configuration and GT LEGENDS menu configuration

- I read something about to change parameters on plr file, but i don't know what is this Plr file, and what will happen if i set up this.

A lot of thanks !!!

NO

My purpousal is get the best real sensation playing GT LEGENDS.

For now i can set up G27 wheel standar configuration and GT LEGENDS menu configuration

- I read something about to change parameters on plr file, but i don't know what is this Plr file, and what will happen if i set up this.

A lot of thanks !!!

Hello, first, you can find your plr file at GTL/Userdata/Your Profilname/Your Profilname.plr

Make a copy of the plr file and save it, next edit it e.g. with notepad, scroll down and replace the lines from "FFB Device Type="1" // Type of FFB controller: 0=none 1=wheel, 2=stick/custom, 3=rumble pad." till end with e.g. my settings, save your plr file (not as a txt file but as .plr file.
Try it. If its not yours, replace your plr file with the saved one and start again...

Im also use the Logitech Profiler Software with these setting, see picture below

Glück auf! http://www.altbierbude.de/images/fbfiles/files/PLR.txt

well,i did gave an answer first,but under wrong thread :) LOL im getting too old for this s... :)

http://www.race2play.com/homepage/show_posts/7229

read it,and try it. i did with my very bad wheel,now its acceptable. With yours ? I think it will be a spectacular feeling Dont overtweak it If you get stuck,or unsure what you should do,contact me in PM will help you. Very KR from zagreb

anyway,solution above mine is more simple to use. Me ? i love tweaking my games,so i changed my lines manually. Anyway,if you get stuck,call for batman :) He will arrive in style :) KR

Hi :)

Drehbereich = 290Â° ??? :(

so, is my value =540Â° too much for Gtl cars?
(27Â° steering angle in GTL parameter menu)

Lucas

Micha a lot of thanks for everything!!! now my experience is more real, but i have one question:

With your set up don't need change any in GT LEGENDS menu controler no? It won't have any effects,no?

Thanks again !!!

I'm not shure what you mean, you could change everything in gtl menu controller and it should be have an effect...???

GlÃ¼ck auf!
