
Left foot brake possibility

Geschrieben von Lehh - 27.12.2015 13:26

Hello. I've noticed that i cannot realize two axles by time. So when the throotle is 100%, my R foot is "to metall" and i want to take a brake pedal by L foot it doesnt moove brake axle but decreases throttle axle utill throotle = 0% and then begins to brake (((
maybe i should modify setup.ini in any way, or add some utilities? Or it's no way to realize such feature of racing caf driving?

Hi Lehh,
what are your pedals (Logitech, Thrustmaster, Fanatec, MS, or ...)???
And what is the driver version, you are using?

We need some informations to help you.

regards,
diki

Hi,

wenn you are using the Logitech Gaming Software, it's important the uncheck the button "combined pedals".
