Cars download OK, Tracks do not

Geschrieben von regen70 - 06.03.2017 10:50

_____

I've returned to GTL after a few years away and have migrated to the Steam version.

I've installed the Autoupdate and used it to successfully download the cars. The 'StandAlonecars' folder in the archive folder is 5GB and I can use them without problems in GTL
I assumed that the tracks would be downloaded at the same time as the cars but no tracks have downloaded. I have restarted my PC and the Autoupdate several times. When the Autoupdater starts, the display shows 1 item (ID 1417 Austin Healey Progress 100%).
The 'Update' and 'Start GTL' icons are greyed out.

There are no error messages
The SSD where GTL is has 45GB free space and the Archive HDD 290GB free.

Any suggestions as to what I might be doing wrong?

_____

Just an update
I reinstalled Autoupdate and that seems to have solved the problem
