## 3sec. Black screen (and lag) while playing

Geschrieben von byagm - 23.03.2017 13:46

---

Hi all!

IÂ´ve update windows 10 version, and my graphic card has started to make me few seconds of black screen while playing.

It makes me lag (stops my car in the place during 2-3 seconds).

It can happen every 5 minutes or every hour.

My motherboard/graphicCard is superclean, no power problems, just happens since I upgraded win10 version.

Any idea?

Ty

Hi AGM,

Have you upgraded from an old system such as windows 7 on Windows 10?

Greets East:)

Sounds like the Nvidia Bug.

If you have a Nvidia graphic card, there are some information in the forum to solve the problem.

Regards,

Its a native win10.

I think IÂ´ve solve the problem installing native drivers (from ASUS page in this case). Its an older version of drivers but, if it works...
