## error when running pilsbierbude\_en

Geschrieben von spleencheesemonkey - 28.03.2017 20:14

---

Hi all,

I couldn't find any post with a similar theme to mine so I hope I have created this in the right place.  
I'm running win10 with GTL downloaded from steam. I've followed the instructions best I can, have installed GTL to my secondary drive, and installed the bierbude autoupdater, the patch etc in program files/gtl.  
When i get to the instructions where it says run pilsbierbude\_en I get the following message:

```
"Traceback (most recent call last):
  File "F:\Program Files\GTL\Bierbuden\pilsbierbude_en.pyw", line 162, in
    main()
  File "F:\Program Files\GTL\Bierbuden\pilsbierbude_en.pyw", line 120, in main
    if not the_app.myconfig: raise Exception(raise_msg)
Exception: No internet connection exists or the internet connection is not allowed.
Please check your firewall, proxy and router settings."
```

I've forwarded ports on my router (although could do with someone telling me if they're the right ones).

I'm not sure what to put in local\_ip\_lobby.txt to get the bierbude servers.

I also notice there is a GTL folder in program files\steam\steamapps etc. Should my ip\_lobby.txt be in there?

I've downloaded all the updates using the autoupdater, have run the 4GB patch, but in the lobby options window of the updater:

hosts-www.gtl-server.net

local\_ip\_lobby.txt

local\_ip\_backup\_lobby.txt

local\_ip\_ftp.txt are all blank. Should these be pouplated?

Also in the autoupdater software, my username and password will not stay populated. Should I use my altbierbude login details?

I'm thinking I've made a right balls-up of this so would appreciate any advice!

Sorry for the long post.

=====

## Aw: error when running pilsbierbude\_en

Geschrieben von diki - 28.03.2017 21:09

---

Hi spleencheesemonkey (interesting name :) )

please try again a new installation, but use the altbierbude\_en... NOT the pilsbierbude\_en...

Use this link for more Information (unfortunately in German, but easy to understand/translate with google):  
<http://wiki.bierbuden.de/GTLInstallation>

If it fails again, please join Teamspeak and we will bring you on the ABB GTL servers.

Regards,  
diki

p.s. we are just preparing a big event for the weekend, but I am available tomorrow or on Friday night. Please send a PM to me with your proposal.
