
Black sceen in Lemans

Geschrieben von Marcelo - 16.06.2017 19:51

I it looks like i have black screen problems with mods of historic cars like the last race in Sebring and like in Le Mans, i uinstall and re-install the nvidia drivers but the problem hapens only in a few tracks or Class of cars i'm not sure if is for the mod car or the track...any idea? I tought it was solved but....no and i'm tired to install and re-install all kind of nvidia driver versions...

Hi Marcelo,
use the GTLConfig.exe and select for the shader level "Directx8" (eight).
This is working for me with the newest Nvidia driver ... :)

Regards,
diki

I would recommend directx 8 too, it works fine for me and even better than directx 9

Hi Marcelo,
Does it work now? What is your solution?

Please feedback for other racer with the same problem.

Regards
diki

Hio I have the black screen problem only in Le Mans track,I can confirm that. for this reason i can't do any race in this track, that's a pity. It is strange because only have this black screen problem in Le Mans, I had it too in Le Mans of the LMC Cup.

If you had it with all Le Mans versions, it is a problem with your Pc. The Tracks are from different people and have nothing in common.

Glück auf!

Hi Marcelo

I had same problems with Dijon GP.
I deleted track and downloaded it and installed, works.

Try it this way.
First delete track in folder locations.
then download track here:

http://www.altbierbude.de/component/option,com_remository/Itemid,26/func,select/id,1/lang,de/

put it into folder locations.

Hope it works

Before installing track go to

GTL-folder > user data > LOG > HAT > in this folder delete all entries
