## Autoupdater installation issues.

Posted by Reno - 2017/09/19 00:23

---

I tried to install the updater for join this nice community, but that message appear during installation:

Download failed ..www.bockbierbude.de/autosync/\_boot/rtf2syn.client.zip Danke fÃ¼rs checken

Someone can tell me how to solve?

Thanks a lot!

Hiho,

You only need the content of the ABB and the two pythons, please do not choose anything else

GlÃ¼ck auf!

I tried selecting only ABB and phyton (that is non-unselectable) but same message. I tried unselecting everything too but no difference.

Is possible to manually get those files that cant be downloaded?

You didn't need any content from bockbierbude, pls try again from the beginning

GlÃ¼ck auf!

For me, the installation works without any problems

Hi,

should look in that way: <http://www.altbierbude.de/images/fbfiles/images/Updater-1aeed546ef8a3f9cba57a8313ae352f5.JPG>

=====

I set up the installation as this but the same error appear. <http://www.altbierbude.de/images/fbfiles/images/lmmagine.jpg>

i tryed the download starting the installer as admin too, and with firewall disactivated.

hiho,

why you want content from weissbierbude??? Pls, look at the screenshot!

Download Updater from here -->

[http://www.altbierbude.de/component/option,com\\_repository/Itemid,26/func,fileinfo/id,650/lang,de/](http://www.altbierbude.de/component/option,com_repository/Itemid,26/func,fileinfo/id,650/lang,de/)

Glück auf!

I do exacly like that, i want albierbude. I downloaded from the page you linked and retried, nothing changed. I saw that the link is from weissbude but I unselected it for sure. Look strange to me.

I've already forwarded the port for the next peer to peer step too, for be sure I'm windows 10 user.

I'm windows 10 user.

I'm too and it works :dry: i'm running windows with an administrator account...no more ideas for now...:( too late

Glück auf!

I tried with another pc connected with the same router, nothing changed.

I'm afraid there is something wrong with my connection that can't download those files for some reason...

Is possible to get updated here the already extracted file?

This evening i will try again openin ALL ports on my router. I saw your step by step post (that now is disappeared) and is exactly like i do.

Hi Reno.

Seems you have an "autodownload" problem, so here you have 3 archives you need.  
(Install first python, then wxPython, then execute altbierbude\_en.)

Download here (3 archives in 1 zip):

<https://goo.gl/RMTgXw>

That resolved every my problem! I really thanks you!!

I cant really figure out what my problem with installer was. I literally tryed everything, usually i'm pretty good resolving those issues on my own...

Hello Reno,

I think theres no problem with connection and so on.

I tried it on my laptop again - and it works without problems.

I deinstalled all ABB, python and wxpython. If you have an old installation - deinstall it and remove the trash with a tool like iobit uninstall.

Then make a clean install like above - every step as described above - thats important - and then it should be working for you or your friend.

Greets

rdjango
