Hio !!

In mount panorama the trees and signals and shadows appears and disapears, not all of them, just in frst and second corner and in the long straight, any idea to fix it?

A lot of thxs !

Same here! Thought it's due Performance-lack of my system. Will try to reduce detail-level tonight and them report here

Nope, it didn't work! I reduced the Trackdetail-level from maximum to medium, and still objects are flickering or suddenly appearing and disappearing!

Probably the level "low" works, but I haven't tried it yet.

Ouh, I nearly forgot: my Viewing-Distance is "very high" (or "maximum", if you like).
