## Hotlaps and Lowguard problem...

Geschrieben von Hagapito40 - 02.01.2018 20:00

---

Hi! new guy here!

I have Lowguard instaled on a folder inside the istalation i use for online racing. I run GTL from the LowGuard icon once i start the program...the log screen shows all in green yet, today i have record a lap time at Autumn-ring but the Hot laps database show it with lowGuard icon in Ren...so is not valid :(

What can be wrong? iÂ´m handy twiking archives...is just i donÂ´t have a clue!

Thank in advance!

Hello Hagapito,

maybe something is wrong with your installation. Try a clean GTL with Autoupdater...

Harald

It is a clean install...with autoupdater, except the tracks...downloaded from here manually!

I have also instaled the option Advanced setup menu from "tweeks" on the Autoupdate program. Can that be the problem?

No, thats not the Problem.

I got the advanced setups installed too, and i get my laptimes in green.

Thanks DerOlf!

Problem SOLVED!

In case someone else have the same issue...

---

-Add an exception to the GTL and the lowguard folder on the antivirus. (in this case was ESET32)  
-In win7 give proprietary rights over the GTL folder to your profile (no matters if you have Admin level assigned)  
-some times don't know why GTL.EXE shows in red on lowguard, with the message that is use by another application, but after disconnect from the server an reconnect the problem is solved and all looks green!

:) Now the problem is...I have to be faster! :blink:

Hi!

Looks like I have the same problem with lowGuard. I dont understand what it means "give proprietary rights over the GTL folder to your profile" How can I do this?

Could it be because of steam version of GTL?

THX

lowguard shows this: <http://www.altbierbude.de/images/fbfiles/images/lowguard.jpg>
